

## The VXR System's 2023 Redesign

It's here! The newly redesigned VXR (Veterinary X-Ray) System is available now, with customer feedback incorporated. The new system is retrofittable, compact, and highly practical for veterinary spaces.

### Highlights

#### Compatible

We've removed the generator integration and added a "normal Bucky", so veterinarians can use the acquisition system of their choice.

#### Compact

The generator, available in 32kW with or without capacitor assist, has been relocated under the table.

#### Practical

A urine trap has been added, which is a common feature that techs appreciate.

Generator controls are conveniently located in front of the tube head and include an APR screen (pictured) for anatomical selection corresponding to generator techniques. These are pre-loaded with CR techniques, so *Fujifilm is providing a set of [DR APR settings](#) (available in the Box.com Service – VXR folder) that reduce the programmed dose by half.*

Techniques can also be customized and saved by the veterinary staff as needed.

*Production units will have different accent color placement than pictured. No performance specifications are affected.*

## Configurations

The VXR System can be used with any detector system and is available with FDR SE Lite for customers on a small budget. Please contact your sales representative for pricing.

## Sales Resources

If needed, please request access via the [Fujifilm Distributor Resource Request Form](#).

The quote template, PowerPoint, and product photos are in the [Fujifilm Sales - VXR Veterinary X-Ray System](#) folder on Box.com.

The new system is installed and ready for customer visits in the Lexington, MA showroom.

## Service Resources

If needed, please request access via the [Fujifilm Distributor Resource Request Form](#).

Service materials have been added to the [Fujifilm Service - VXR Veterinary X-Ray System](#) folder on Box.com, so anyone with existing access can also access the new materials.

The new system is straightforward to set up, and the manuals and SIBs are most likely sufficient for guiding personnel through the installation. As such, VXR system-specific service training has not been scheduled but can be if needed.

## Discontinuations

This introduction officially marks the discontinuation of the original VXR and accessories.
