

The AMRAD Medical SRS Pocket

If I was to ask you, what fits into your pocket...what would you say? Your keys? Your wallet? Your cell phone? Your x-ray suite? Wait! Did you just say x-ray suite?

That's right, Summit industries a leading manufacturer of radiographic equipment has designed and developed an x-ray suite that fits into a pocket of a medical facility.

The AMRAD Medical SRS Pocket is designed to tackle one of the biggest challenges that facilities face today which is the cost of real estate.

Space for an x-ray suite is always needed to perform exams with ease, but existing facilities often do not have adequate space. For new medical locations that are being built, space for x-ray is often an afterthought.

With the growth in urgent care, facilities do not always have sufficient space for imaging. The idea of being able to open up a practice quickly with minimal construction costs is a win for the group opening the urgent care.

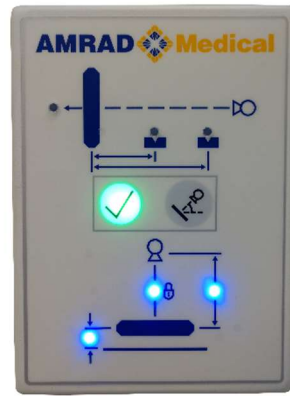

The AMRAD SRS Pocket solves that problem because it can be installed in the pocket (9' x 9' room) of a medical facility.

A creative dual rail design, allows the tubestand and wallstand to function independently; however, this unique two rail design also allows the tubestand and wallstand to come together and form a single unit that can be moved and positioned simultaneously.

Seeing is Believing

When the wallstand and tubestand are used independently, upright exams are easy and efficient. The intuitive system status display (SSD) lets the technologist know exactly when the units are in the proper detents for 40" and 72" imaging. No more guessing.

Neatly Tucked Away

The creative dual rail design brings the tubestand off the back wall which allows the generator cabinet to be tucked behind it saving on overall length of the room. Serviceability of the generator is easy from this tucked away position.

Don't Get Double Crossed

Our design and engineering teams took into an account all the exams a facility would need. The Pocket's unique two rail design allows for a mobile table (optional) to slide in between the rails so cross table exams can be performed with ease.

Tilting the odds in your favor

The tilting cabinet on the wallstand allows for all types of exams. Easy to read and operate tilting mechanism with a tilt range of +105° for cervical work and 0° for extremities and detents every 15° in between means the possibilities are endless.

No longer will facilities be denied the idea of having Imaging without doing construction. The time is now, the product is here, the AMRAD Medical SRS is the answer. Big Ideas in a pocket-sized product.
