The Dedicated MRI Factbook

Esaote MRI: A world of difference
“Creativity in Healthcare” is Esaote’s motto which represents the philosophy that has been adopted by the Dedicated MRI product line since its inception in 1993, a year that marked the launch of the world’s first dedicated MRI for extremities, Artoscan. From the outset the company has positioned itself as an innovator and has broadened its product offering, gaining recognition from industry as a pioneer in Dedicated MRI.

Over two decades, Esaote has continued to maintain its leadership position in the Dedicated MRI segment because its products are focused on satisfying specific requirements that have not been met by the other imaging companies. Research and development activities are strongly driven by customer needs and by working very closely with users and clients, Esaote is able to respond to new market demands and expectations.

The growing family of innovative dedicated MRI systems boasts common features such as ease of use, open ergonomic design that guarantees optimal patient comfort and cost effectiveness. The positive cost-benefit ratio that can be attributed to Esaote’s MRI systems is particularly attractive given the current economic climate and industry challenges facing healthcare providers.

eXP Technology available on all Esaote dedicated MRI systems

G-scan Brio

S-scan
O-scan, Take Pride in Performance

O-scan, the Star Performer in MRI for extremities, satisfies the need for higher throughput in Radiological settings and Orthopaedic practices. It can easily work alongside whole body scanners in Radiology departments, freeing up the time for major clinical cases on the whole-body imager therefore allowing you to improve your workflow and provide an optimal patient experience.

- Very high quality MRI joint examinations at a much more competitive cost than standard whole body MRI systems
- Open, ergonomic design, no claustrophobia
- High patient comfort
- Real-Time Positioning
- Fits in only 9 m² (100 ft²)
- Low power consumption runs from a standard wall-plug
- Complete set of dedicated DPA coils
G-scan Brio, The Key to Confidence

The G-scan Brio is a revolutionary MRI approach for all musculoskeletal applications, which allows you to increase your diagnostic accuracy and confidence. The open and tilting design is the new and innovative way of doing MRI in which the position of the patient becomes an integral part of the outcome of the examination.

- **G-scan Brio** is a dedicated musculoskeletal MRI system covering all applications from foot to shoulders and the most important spine segments such as L & C-spine.
- **Weight-bearing**: a new frontier in spine and knee MRI giving your clinic the possibility to distinguish itself from competitors.
- **Real-time positioning feature**: display on the gantry showing in real-time the MR image of the joint assuring fast and accurate positioning.
- **Open MRI**, no claustrophobia.
- **Fits in only 23 m² (245 ft²)**.
- **Complete set of dedicated coils**.
C-spine. In weight-bearing flexion, evident ligament instability at level of C4-C5.

Lumbar Spine. Articular facet instability highlighted in weight-bearing, while supine exam only shows arthrosis.

Knee. In weight-bearing the actual damage to the cartilage of the medial compartment is clear and the origin of the bone edema is well identified. The lesion to the medial collateral ligament is visible only in weight-bearing.

Spondylolisthesis at L4-L5 level, highlighted in the weight-bearing position.
The S-scan dedicated MRI scanner represents the latest development of Esaote’s technology in MRI. It is perfectly in line with today’s need for efficient and economic health care and a sensible choice for any practice with a substantial musculoskeletal work-load.

- The S-scan covers all musculoskeletal MRI, from foot to shoulders and the most important spine segments such as L&C-spine
- The unique design and wide, rotating patient table guarantees easy patient positioning, patient comfort, maximum stability and easy examination management
- Open gantry: easy patient access, no claustrophobia
- Real-time positioning: fast error free positioning with the real-time feature that includes fast sequences and a display on the gantry
- Fits in 20 m² (238 ft²). Same space as the Esaote Opera and E-scan systems, therefore an ideal upgrade path
- Complete set of dedicated coils
Q&As on Dedicated MRI

What are the benefits of dedicated MRI with respect to conventional whole body MRI systems?

Esaote Dedicated MRI systems boast unique technical features that target specific applications, are equipped with dedicated coils and customized software, have an open design and optimal ergonomics which maximize patient comfort and eliminate unpleasant claustrophobic reactions. They require limited installation space, and feature much lower installation and maintenance costs.

Why is image quality so good?

Most imaging experts are surprised by the high quality images produced by dedicated technology. Thanks to a combination of dedicated MSK sequences, advanced RF coils, better computing technology and optimized magnet homogeneity, Esaote MRI systems deliver high resolution MSK images with good acquisition times.

Who are the main users of dedicated MRI?

Dedicated systems are suitable for any clinical environment from Radiology departments in large hospitals, orthopaedic and sport medicine centres aiming to provide direct MRI services, to specialized rheumatology centres.

Why should a healthcare center invest in a dedicated MRI for extremities?

One of the main reasons why an extremity MRI is an appealing investment is because it can work as a standalone system or alongside whole body scanners freeing up the time for major clinical cases allowing you to optimize resources and reduce waiting lists which can be a problem for many healthcare facilities. Given that over 20% of exam requests are for joints excluding spine, if you use a simpler system for handling the extremity cases you can increase efficiency and avoid the extra costs connected with the purchase of another whole-body system.

Esaote MRI: The most cost effective systems

The low break even of Esaote systems is fully in line with the economic constraints of today’s healthcare environment which make them optimal investments also for private clinics.
Facts & Figures

- Over 1,300 systems dedicated to extremity imaging (Artoscan, C-scan, O-scan) have been sold worldwide.
- More than 100 scientific papers have been published on Dedicated MRI.

In 1994, Artoscan was included on the list of the ten most important innovations in the imaging field (Radiology Today USA 1994).

In 2001, E-scan was awarded the "Compasso d'Oro" from ADI (Association for the Industrial Design). This is the most prestigious design award in Europe with a history of almost 50 years. Including Esaote, the 2001 "Compasso d'oro" has been awarded to such companies like Ferrari (sports cars) and Alessi (the home supplies company).

Esaote Dedicated MRI Systems cover over 50% of MRI Applications.
